## BEFORE OPERATION

- **Note related to transportation and movement**  
Carry out the following operations before transporting or moving this unit.
  1. Remove disc and the magazine from the unit and turn the power ON.
  2. Wait a few seconds to check that the display appears as shown in the illustration at the right.
  3. Turn the power OFF.

### • Beware of condensation

When water vapor comes into contact with the surface of cold material, water drops are produced.  
If condensation occurs, correct operation may not be possible, or the unit may not function correctly.  
This is not a malfunction, however, and the unit should be dried. (To do this, turn the POWER switch ON and leave the unit as it is for several hours.)

- Be especially careful in the following conditions:
- When the unit is brought from a cold place to a warm place, and there is a large temperature difference.
  - When a heater starts operating.
  - When the unit is brought from an air-conditioned place to a place of high temperature with high humidity.
  - When there is a large difference between the internal temperature of the unit and the ambient temperature, or in conditions where condensation occurs easily.

<b>English</b> The unit's power supply is secondarily connected. Note following. The unit is not completely disconnected from the mains as long as the power cord is connected to a wall outlet.	<b>Note:</b>	<b>Dansk</b> Strømmen til apparatet afbrydes på den sekundære side. #### Outline

This LSI is a  $\Sigma\Delta$ -type 2-channel D/A converter ( $\Sigma$ DECO) which has a built-in over-sampling digital filter and is used for playback of 16 bit digital audio signals. This LSI also has de-emphasis filters for 3-types of fs and soft mute function.

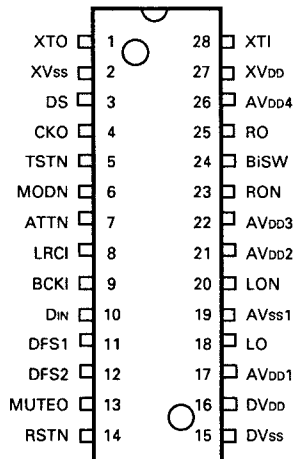

Furthermore, the CD player can be set to the normal or double-speed playback mode without changing the system clock. Since the package is a 28 pin shrink DIP, this LSI has high cost performance.

## MECHANISM OPERATION DESCRIPTION

### 1. Magazine Setup Operation

If load the magazine to unit, fix the magazine by magazine lock lever and set the magazine in-switch (S4) to on.

# DP-M5540/M6640/M7740

## MECHANISM OPERATION DESCRIPTION

### 2. Plus One (P1) Tray Open and Close Operation

P1 tray is moved by P1-loading motor (P1LM). In open mode, P1-open switch (S6) is on, in close mode, P1-close switch (S7) on.

### 3. Magazine Lifter Operation

After loading magazine, the magazine is controlled vertically by vertical motor (V.M). The vertical position is memorized by the lift position sensor (PH1).

The home position switch (S1) is turned on when the unit is in STOP mode (Disc holder at the lowest position).

### 4. Tray Loading Operation (In Case of Magazine Inserted NO.3 Tray)

After loading magazine, the tray of the magazine is pulled by the loading motor (L.M). When the tray is loaded, the loading in-switch (S5) is on, on the contrary when the tray is returned to magazine, the loading out-switch (S2) on.

The tray position is memorized by the memory guide's hole and the memory switch (S3).

## ADJUSTMENT

- RF signal and TE signal in test mode (PLAY).
- If the diffraction grating has been adjusted properly, the influence of triggering is observed on the TE waveform of aporox. 13µs after RF signal, in the form of a projection.

- RF signal and TE signal in test mode (Focusing servo on, CHECK).
- Adjust TE signal so that the waveform is symmetrical above and be low 0V. (TE BALANCE, VR2)

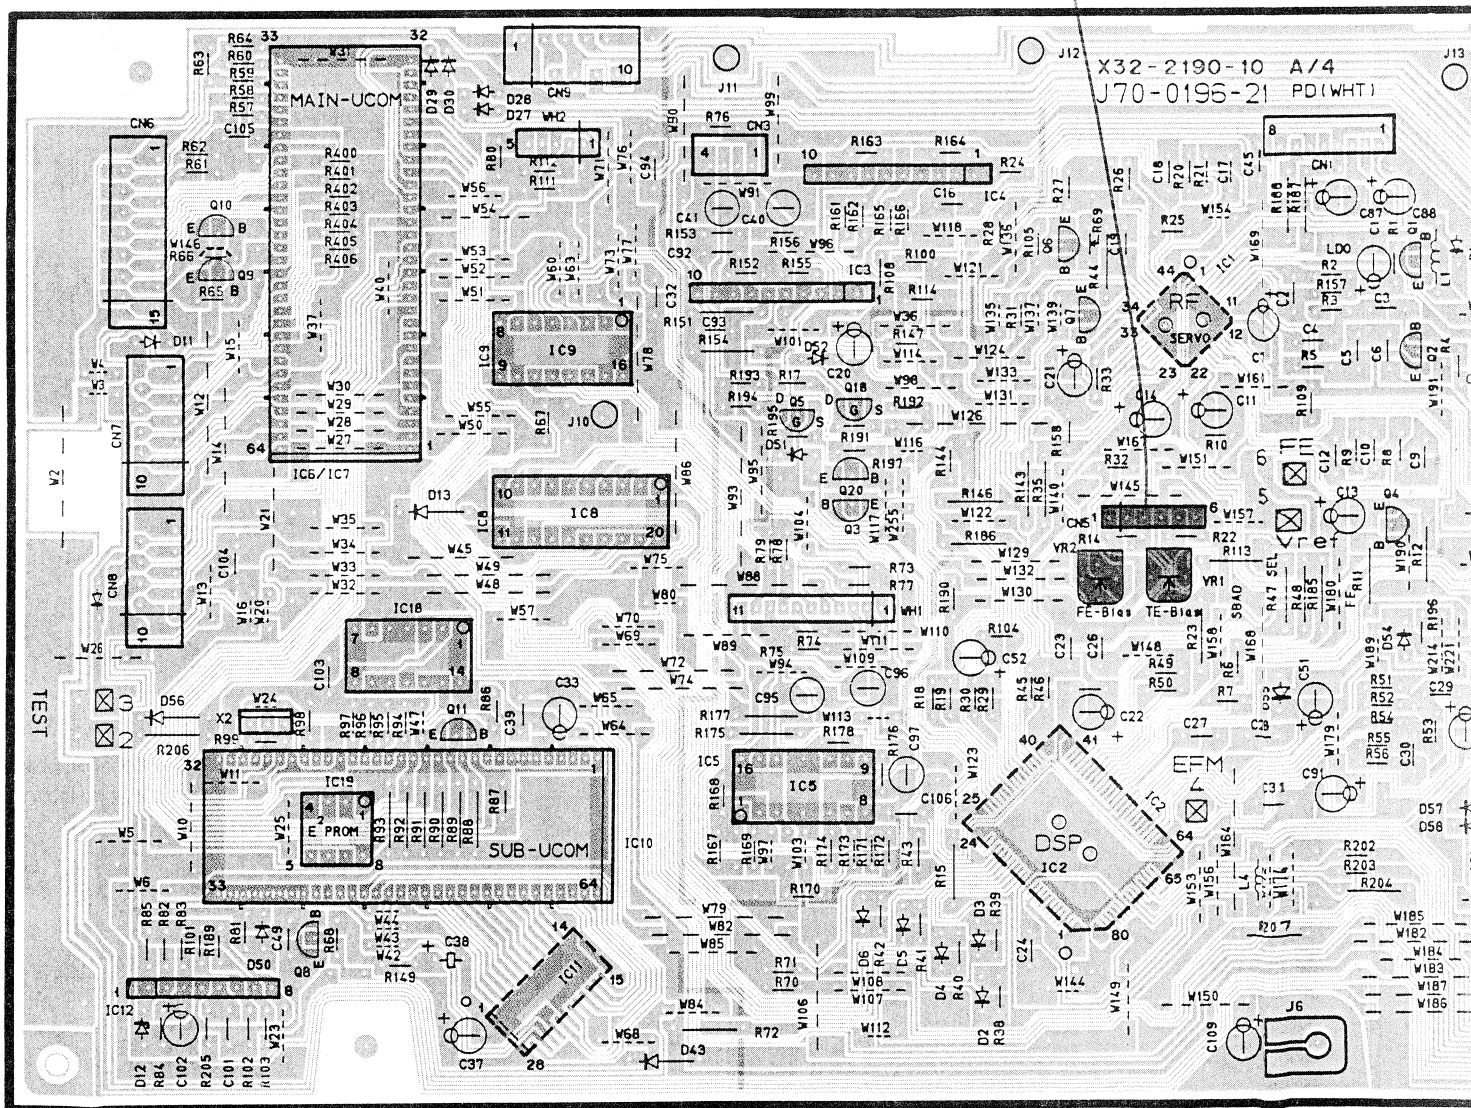

- RF signal in test mode (PLAY).
- Perform the focusing offset adjustments so that each of center cross points are focusing into one points above and below the center shall also displayed clearly. (FE BALANCE, VR1)
